**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-13 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The structure and manner in which “each fastener” is “adapted to be locked or unlocked upon receipt of a suitable signal” (lines 1-2 of claim 1) is critical or essential to the practice of the invention, but is not included in the claim(s) and is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). More specifically, neither the claims nor the disclosure sets forth any specific fastener structure that allows for receipt of a signal much less describe what signals are suitable or detail how any such signal effects mechanical locking or unlocking. Furthermore, no specific locking or unlocking structure is described in the disclosure. Note especially that the fasteners (12) appear to be common tubes with no moving parts or locking or signal receiving structure. How does a tube effect any locking/unlocking? How does a tube effect reception of any signal? Since no new matter may be added, the examiner suggests filing a Continuation in Part that gives full disclosure of how claimed limitations are effected. Such a filing should include drawings and a written description that shows and describes the invention in a clear manner.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear how the limitation “each fastener adapted to be locked or unlocked upon receipt of a suitable signal” (lines 1-2 of claim 1) is meant to limit the claim since applicant’s own discloser does not set forth any structure to effect such action. (see 112 1<sup>st</sup> rejection above).

#### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Donaldson (U.S. Patent 5,090,650).

The prior art discloses applicant’s broadly claimed structure as best understood by the examiner (see 112 rejections above).

The prior art structure is presumed to be fully capable of performing applicant’s functional limitations in accordance with MPEP 2112.01(I).

- For instance each prior art fastener is **adapted to be** locked or unlocked upon receipt of a signal (e.g., an electric signal between radios with which a first person

can instruct a second person to unlock or lock the fastener with tools such as screw drivers, wrenches etc.)
